

Technical Specification: ENWIPI Enclosure

Indoor Wall Mounted Enclosures

Specifically designed for indoor applications and sealed to IP43, the indoor enclosure range is robust, and aesthetically designed, without compromising functionality.

Enclosures are manufactured from aluminium, welded for maximum strength and then powder coated (colour optional), giving durability and protection.

The access door is fitted with a 2 point front compression lock system that secures into the body of the housing. The door is fitted with a window with Anti Reflective coating as standard.

Inside the housing would be an internal landscape mount for the display, on our patent pending screen mounting system that can move the display to either the front viewing window or to the rear of the housing, allowing the unit to accommodate screen depths up to 75mm.

Each unit comprises:

- Internal adjustable portrait display mount
- 4 point inlet and outlet filtered fans
- 2 High security locks
- Cable access panel
- PC Mounts
