NowSignage Features & Benefits

Multi-screen content scheduling: Use the intuitive NowSignage platform to schedule content to appear on targeted screens at a specific time or day of the week. This allows users to automate the process of updating screen content to operate at maximum efficiency.

Advanced content types: Upload video and image files to your asset library. The NowSignage technology then optimises your content automatically and plays in offline mode in order to maximise performance and reliance on a stable internet connection.

Social media & RSS Feed publishing: NowSignage have built in the most advanced social media search facility on the market. Integrating moderated social media content and RSS feeds into your digital signage displays hugely influences buying decisions.

In-platform App Store & Widgets: Advance your signage by activating approved and fully integrated Applications, such as Microsoft PowerBI, Google Traffic, Instant screen messaging...etc. Demonstrate ROI by presenting business critical information to your audience.

Security compliance & enterprise level user controls: We put security at the heart of everything we do. All data sent to the screens is encrypted and fingerprinted against known assets. Advance permissions can be utilised to assign roles and tags that grant users with the required level of control.
