

Fresco Totem

The Fresco is an outdoor totem that has been designed to give a contemporary aesthetic to outdoor digital signage allowing your content and brand to take centre stage.

The Fresco is environmentally sealed, secure and durable making it the perfect solution for any outdoor public space.

Features

Available in screen sizes from 46 inch to 75 inch, our high brightness and high temperature screens thrive in outdoor locations. The Fresco is environmentally sealed and includes temperature and humidity monitoring and control.

Using industrial grade LCD panels and rugged PC technology ensures that the unit is suitable for prolonged hours of use in harsh public realm environments.

Construction

Available as either a 'bolted down' or free-standing structure, the fabricated stainless steel housing and integration of all peripherals within, allow the Fresco to be a purely independent proposition with little need for additional infrastructure. The safety glass front includes anti-reflective coating, offering both protective and enhanced visual capabilities.

With an architectural powder coat finish of choice and the addition of LED illumination and vinyl options, the Fresco can be easily adapted to suit any individual brand requirement.
